

INDEPENDENT GROCERS

The **Omni 3750** with SoftPay fits nicely in check-out lanes and supports a broad range of payment types and communication options needed in the grocery environment.

Multiple Payment Types. The Omni 3750 supports credit, debit, EBT and check authorization, so merchants can offer their customers a choice in payment methods while taking advantage of lower transaction fees associated with PIN-based debit.

Fast Communications. Supports broadband communications for always-on connection via Ethernet, DSL or cable, delivering secure transactions in four seconds and eliminating the need for multiple phone lines.

Pre-dial. Transaction time is shortened because the Omni terminal pre-dials as soon as the card is swiped in dial mode.

Check Processing Options. To reduce bounced check fees, checks can be authorized using select check service providers via split dial or through a primary processor.

Detailed Reporting. Simplifies accounting by showing detail for each transaction in the batch by clerk, including clerk ID, partial account number and amount.

Clerk and Shift Reports. Reports provide transaction detail by clerk ID and by shift.

Batch Totals Review. Batch totals can be reviewed on the terminal display for a quick snapshot of the day's business.
